## Malaysia's current account surplus to GDP ratio upgraded to 3.5% - MIDF Research

ccording to MIDF Research, the relative size of the current account balance is expected to increase 3.5% of GDP this year (2021: 3.5% of GDP) from their initial expectation of 3.1%. This is in view of the Dept of Statistics Malaysia (DOSM) stating that Malaysia's current account balance recorded a surplus of RM15.2bil in the final quarter of 2021 despite prolonged nationwide restrictive measures. And a further reopening of economic activities and the continued expansion in export of goods will help drive a wider surplus of Malaysia's current account balance. This is driven by the exceptionally high net exports of goods with a doubledigit growth in prices of commodities. The research house maintains that the sustained surplus will be supported by continued expansion in exports of goods driven by manufactured goods and commodity-related products. As more domestic economic activities reopen, import growth is expected to record higher than export growth this year, at 5.1% versus 4.5%. On the services account, it foresees a smaller deficit in the trade of services for 2022, thanks to the proposed reopening of international borders. Meanwhile, demand for foreign services from the trade-oriented and construction sectors is likely to expand modestly. In the fourth quarter of 2021, the services account recorded a higher deficit of RM15.5bil compared to a deficit of RM15.2bil in the third quarter, dragged down mainly by the travel segment. Traditionally, the travel segment will record higher inflows than outflows. However, the pandemic has flipped the table. With the reopening of domestic economic activities and more leeway given to the fully vaccinated, outflows of travel segment increased to RM4bil in Q4 '21, the highest since Q2 '20, possibly due to Malaysians travelling to other countries. The travel segment is expected to record a smaller deficit in 2022, particularly with the gradual reopening of international borders. As for other services components, no significant changes is expected throughout the pandemic years.

Notably, the National Recovery Council has recommended that the government fully reopen international borders on March 1. However, the borders would not be fully reopened in the first half of the year given that the Health Ministry has forecast daily infection cases to peak at 22,000 by end of March. Additionally, vaccine rollout for children aged five to 11 was only started in February and may take at least 1.5 months for the age group to be fully-vaccinated. Hence, June 1 is expected to be the earliest date for Malaysia to reopen its international borders amid the flattening curve of daily infection rate and higher twodose vaccination rate as well as booster recipients. For 2022, MIDF Research forecasts services account deficit to GDP ratio to improve from minus 4% in 2021 to minus 3.6%. The travel segment should record a smaller deficit size of minus 0.8% this year (2021: minus 0.9%).

#### Inflationary pressures, price hikes temporary - IDEAS

According to the Institute for Democracy and Economic Affairs (IDEAS), the inflationary pressures and price hikes that Malaysia is facing is temporary and can be effectively controlled through proper monetary and fiscal policies. Even though the inflationary trend is disconcerting, inflation can be controlled efficiently in the short to medium term through the timely deployment of monetary policies. This is in relation to the Statistics Department finding that the country's inflation rate (as measured by the Consumer Price Index) increased 3.2% year-on-year in December 2021, mainly due to the rise in food and fuel prices and the low base effect. IDEAS noted that the US Federal Reserve has signalled that it would increase its Overnight Policy Rate (OPR) multiple times this year to tame inflation. Malaysia will likely follow suit by increasing its OPR gradually in 2022 and 2023, whereby Bank Negara is expected to increase the OPR by about 50 basis points in the latter half of this year. Meanwhile, according to IDEAS

Invest FRIDAY FEBRUARY 18, 2022

director of economics and business unit and acting director of research Dr Juita Mohamad, the current rise in inflation is a global issue, stemming from stronger demand and higher energy prices, after two years of battling the pandemic through lockdowns. The pandemic and the lockdowns led to both demand and supply shocks at a global scale. As a small and open economy, Malaysia was not immune to the devastating aftermath posed by the pandemic. Inflationary pressure is further compounded by the recent flooding in the country, which puts a strain on the supply of selected essential goods produced locally.

#### Malaysia set for a gradual recovery - impressive vaccine rollout, swift measures lauded - IMF

According to the International Monetary Fund (IMF), Malaysia's economy is set for a gradual recovery from the Covid-19 downturn, with real gross domestic product (GDP) growth at 3.1% in 2021 and projected to accelerate to 5.75% in 2022. This is in line with the preliminary findings of an IMF team led by its economist Lamin Leigh which says that growth will be supported by the authorities' impressive vaccine rollout and swift implementation of economic policy support measures. A more severe downturn in 2021 was averted, thanks to the swift, substantial, and multi-pronged pandemic policy response targeted to support affected households and businesses. Growth in 2022 is projected at about 5.75%, driven by pent-up domestic demand and continued strong external demand. The pandemic is set to leave implications that could linger over the medium to long run and the recovery would likely be uneven. The team recommends additional near-term targeted fiscal support to the vulnerable and hard-hit segments of the economy. In the near term, fiscal policy should continue to be nimble and increasingly targeted, with a focus on further buttressing the recovery, minimising economic scarring, protecting the vulnerable segments of the population, and scaling-up productive investments, in line with the authorities' spending priorities. A credible, specific, growthfriendly, and clearly communicated consolidation strategy should be implemented once the recovery is entrenched to rebuild fiscal buffers, preserve fiscal sustainability, and reduce fiscal risks, supported by robust fiscal governance practices. The findings also recommended accommodative monetary policy stance and the continuation of financial sector support measures.

#### Foreign investors jump into M'sian equities – MIDF Research

According to MIDF Research, foreign inflow into the Malaysian stock market rose to its highest in the year so far at RM749.34mil in the previous week amid optimism over the country's recent release of its economic data. The research house, which tracks the Indonesia, Thailand, Philippines and Malaysia bourses in South-East Asia, noted that all these markets recorded foreign inflow for the week on positive sentiment over their stability. Foreign interest in Malaysian equities was spurred by positive developments in the country's economy, including the December industrial production index growth of 5.8%, the December distributive trade sales growth of 3.5% and the fourthquarter gross domestic product growth of 3.6%. The largest foreign inflow was recorded on Wednesday at RM279.64mil and the smallest inflow was on Monday at only RM21.82mil. International funds had been net buyers on the local stock exchange for four out of the past six weeks. In addition, foreign investors were net buyers for every day of the past week, which last occurred in the week ending January 14. Meanwhile, local institutions were active sellers with a sum of RM649.18mil net of local equities sold over the week. Retailers were net sellers on every day of the week except on Monday. By last Friday's close, retailers had net sold RM100.17mil in Bursa Malaysia stock. Year-to-date, foreign investors have been net buyers of RM1.052bil in local equities. Net buying by retailers stands at a marginal RM980,000 while local institutions are net sellers of RM1.053bil of Malaysian stock.

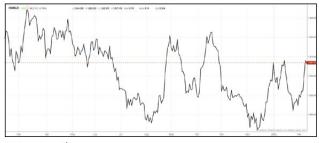

assistant vice-president and analyst Nishad Majmudar, Asia-Pacific's (Apac) large financing needs post-pandemic, and the region's focus on carbon transition and other environmental, social and governance (ESG) risks will propel issuance of sustainable bonds. There was also rising investor demand for instruments that catered to the sustainable market. Conditions were ripe for a rise in the issuance of sovereign sustainable bonds, which is expected to come initially from established issuers. Although the development of regulatory standards and taxonomies across the region is still at an early stage, it will gradually facilitate markets. Apac governments with track records of conventional issuance or have strong market access, such as Hong Kong (Aa3 stable), Indonesia (Baa2 stable), South Korea (Aa2 stable) and Malaysia (A3 stable), were driving sustainable bonds. The issuer base is likely to expand through multilateral support and as investors' appetite for sustainable bonds catches up with vanilla bonds. The post-pandemic focus on investment to meet United Nations Sustainable Development Goals will drive issuance, particularly as major governments including China (A1 stable), Japan (A1 stable) and South Korea pursue net-zero emissions by 2050.

#### **Eye On The Markets**

This week, on Friday (18Feb), the Ringgit opened at 4.1863 against the USD from 4.1915 on Monday (14Feb). Meanwhile, the Ringgit was 3.1165 to the Sing Dollar on Friday (18Feb). On Monday (14Feb), the FBM KLCI opened at 1576.99. As at Friday (18Feb) 10:00am, the FBM KLCI is up 28.59 points for the week at 1605.58 Over in US, the overnight Dow Jones Industrial Average closed down 622.24 points (-1.78%) to 34,312.03 whilst the NASDAQ shed 407.38 points (-2.88%) to 13,716.72.

Apac's investor demand good for sustainable bonds – Moody's

## "Oil is Gold"

#### Markets

After being distracted by runaway inflation data, markets this week had fresh worries as geopolitical concerns took centre stage following Russia's aggression towards Ukraine. This saw oil prices hitting a fresh seven-year record high and nearing the psychological barrier of US\$100/barrel. However, prices eased later in the week as Russia backed off its position from Ukraine's border. Jumping on the bandwagon was a rally in palm oil, Malaysia's golden crop, which saw prices rallying to a fresh all-time high. The rally in crude oil and palm oil sent oil and gas and the plantation sector stocks to close broadly firmer this week.

Meanwhile, the much-awaited Federal Open Market Committee meeting minutes revealed that the Fed will raise rates soon and the Fed is also on alert for a faster pace of tightening if the inflation print warrants it. However, the minutes lack details on the upcoming March rate hike as to whether it will be anticipated 25bps or a double strike of a 50bps hike. In addition, the minutes made no mention of the potential shrinking of the Fed's balance sheet.

#### Economy

Out of the US, the University of Michigan's preliminary February Consumer Sentiment fell sharply to 61.7 from January's print 67.2 and market expectations of 67.0. The reading was the lowest level since October of 2011. Meanwhile, the January US Producer Price Index (PPI) increased by 9.7% y-o-y, well above the 9.1% y-o-y rise expected by the market. Other economic data saw US January retail sales beating market expectations with a m-o-m increase of 3.8%, reversing the December m-o-m drop of 2.5%.

From the land of the rising sun, Japan, the world's third-largest economy saw a 4Q GDP expansion of 5.4% annualized growth rate, which was below market expectations of a 5.8% print. For the year, the Japanese economy grew by 1.7%, marking the first expansion in three years. The Japanese economy had contracted 4.5% in 2020 and 0.2% in 2019. The Eurozone too reported the 4Q 2021 GDP data as the economy as a whole expanded by 4.6% y-o-y, meeting market expectations. According to Eurostat, the Eurozone saw GDP increase by 5.2% y-o-y in 2021. Still, on GDP data, the UK economy expanded by 7.5% y-o-y last year, which was the fastest growth since World War II, and a reversal from the 2020 economic contraction of 9.4%. Meanwhile, the UK also saw an accelerated pace of inflationary pressure as the January print increased to 5.5% y-o-y, a new 30-year high.

However, Chinese inflation data seems to suggest that consumer prices are well under control as the January Consumer Price Index (CPI) rose by just 0.9% y-o-y, down from the December increase of 1.5% y-o-y. China's PPI too eased from the December double-digit rise of 10.3% y-o-y, but remains elevated as the January data saw a rise of 9.1% y-o-y.

Locally, Malaysia's 4Q GDP data of 3.6% growth y-o-y was marginally ahead of the market forecast of a GDP growth of 3.5%. The higher than expected 4Q GDP allowed Malaysia to post a GDP growth of 3.1% for 2021, reversing 2020's deep contraction of 5.6%. Other economic data showed Malaysia's 4Q Balance of Payment improved to RM15.2bil against RM11.6bil in the preceding quarter, while Foreign Direct Investment (FDI) surged to RM24.7bil in the 4Q alone, bringing the full-year FDI to RM54.9bil, up 275% y-o-y from the RM14.6bil posted in 2020, and the highest on record. The significant gain in net FDIs was attributed to a higher reinvestment of earnings in the 4Q of 2021 at RM14.4bil against RM9.1bil in 3Q2021 while debt instruments saw an inflow of RM6.8bil against an outflow of RM2.6bil in the preceding quarter.

In a related development, the International Monetary Fund (IMF) projected that Malaysia's economy will expand 5.75% this year on the back of the successful rollout of Covid-19 vaccines as well as support measures that were implemented. In other news, Malaysia's labour productivity expressed as the ratio of value-added per employment registered a growth of 1.7% in the 4Q of 2021 as compared to a contraction of 5.6% in the preceding quarter. For the year, Malaysia achieved a modest productivity growth of 1.8% against a drop of 5.5% in 2020. settlement agreement sums, and judgment sums totalling some RM47.5mil.

Meanwhile, Sime Darby Plantations, which was subjected to Withholding Release Order (WRO) by the US Customs and Border Protection (CBP), has taken positive steps to address forced labour issues as it will reimburse current and former foreign workers RM82.0mil.

#### Equity

Equity markets globally were mostly weaker this week on the back of investors' concern on rate hikes as well as tension on the Ukraine/ Russia border. Markets that fell eased by between 0.4% to as much as 2.5% on the Nasdaq 100, while markets that rose gained between 0.1% and 2.2%. On the local bourse, it was another week of solid gains as foreign buying interest intensified while a rally among commodity-based stocks propelled the KLCI to close at its highest level in four months. The KLCI closed the week with another 34.92 pts or 2.3% firmer at 1,605.02 pts, adding to the previous week's gain of 44.37 pts rise.

For the week ended February 17, foreigners pumped up their buying interest on the market with an inflow of RM1,038.5mil, which is one of the highest weekly inflow in recent times. Both the local institution and retail participants emerged as net sellers with an outflow of RM858.4mil and RM180.1mil respectively.

#### Eye on Week Ahead

Later today, the US will be releasing the January Existing Home Sales data, which the market is expecting an annualized rate of 6.1mil from the preceding month's 6.18mil. On Monday, February 21, the February IHS Markit Flash Eurozone Composite Index is due while People's Bank of China will decide if it is going to cut its benchmark 1-year Loan

#### Corporate

In contract news, a consortium comprising Dialog and Technip Energies (M) Sdn Bhd, in which Dialog is expected to have a 30% interest, has been awarded a RM724mil Engineering, Procurement, Construction and Commissioning (EPCC) contract by Petronas to build a melamine plant in Kedah. The project will take between 18-20 months for completion and is expected to be ready by 2H of 2024.

In other news, Sapura Energy informed the Exchange that five of its wholly-owned subsidiaries have been served winding-up petitions in relation to unpaid contract sums, Prime Rate of 3.7%. China had lowered the rate last month by 10bps.

On Tuesday, the Conference Board will be releasing the February US Consumer Confidence data. Locally, Bank Negara will be releasing the mid-February international reserves position on Tuesday, 22 February while the Department of Statistics will be releasing the January CPI print on Thursday, 24 February. Next week will also see the tail-end of the current reporting season for companies with a December quarterly ended period.

## 4 Reasons Why You Should Start Investing In The Global Markets

n the past, investing in the global markets was never something that was readily accessible to Malaysians. High transaction fees and high minimum investment amounts made investing in foreign markets expensive and prohibitive, but technological advancements are beginning to bridge the gap between Malaysian retail investors and the global markets.

After all, investing in different markets brings various advantages with the biggest advantage being potentially higher returns compared to the local market. Branching out to global markets is also beneficial to your portfolio as diversifying across asset classes, currencies, and markets helps reduce your overall portfolio risk.

Nevertheless, trading in the global markets comes with its own risks and challenges, so investors must do their due diligence and research before investing. But, if you're looking to diversify your portfolio and explore investment opportunities, here are four reasons why you should consider taking your investments overseas.

#### **1. Potentially Higher Returns**

The key attraction to investing in the global markets is the potentially lucrative returns investors can gain. There is no local stock that can match Tesla's incredible growth in stock price, which grew from less than \$50 in late 2019 to a peak of \$1,220 in November 2021 – a return of almost 2,500%!

Moving away from tech stocks, there's another reason for the NYSE's popularity – its performance in the long run. The Standard & Poors 500 (S&P 500) is a stock market index of the top 500 companies listed in the American stock market and is relied upon as an indicator of the American stock market. The S&P 500's long-term track record is more than impressive: from 1950 to 2021, the S&P 500 has yielded an annualised average return of 11.54%.

While the S&P 500 isn't an index you can invest in, there are various exchange traded funds (ETFs) that mirror the index, such as the Vanguard S&P 500 ETF (VOO).

#### 2. Easier And Cheaper In The Digital Age

Previously, access to the US and other international markets have been reserved only to high-net-worth individuals due to the prohibitive rates. Thanks to the advent of online brokerage firms, the everyday Malaysian can now invest globally thanks to easier access and low fees.

To put things into perspective, the brokerage fees for US stocks investment at a local bank's brokerage is usually a minimum of US\$25 compared to local bourse brokerage fees that can be as low as RM7 per trade. Today, there are platforms with low fees, such as FSMOne whose US stock trading brokerage fee starts from just RM8.80.

#### 3. Putting Your Eggs Into Multiple Baskets

As mentioned earlier, investing in a foreign market may pose some challenges but diversifying your assets helps spread out risk. These days, we're no longer limited by the geographical location we're based at, and with technological advancements, we can invest in foreign stocks whose growth potential will not be affected by anything that happens in Malaysia.

After all, that's the value of diversification – your various investments should not correlate to one another and is a core strategy of virtually every fund manager. According to the Employees Provident Fund (EPF), the EPF's overseas diversification strategy helped contribute to better returns in recent years.

In the first three quarters of 2021, the EPF's overseas investments generated RM8.1 billion in income, which made up 58% of the total gross income recorded in that period – despite only 36% of the EPF's investment assets being overseas investments.

#### 4. Access To More Quality Companies

Investing globally also helps you tap into the potential of companies not listed in your local bourse. There are over 900 companies listed on Malaysia's exchange but there are over 41,000 companies listed globally with a combined market value of more than US\$80 trillion.

The most popular foreign stock market that retail investors invest in is the New York Stock Exchange (NYSE), and with no surprise. Besides high-growth technology stocks such as Tesla above, it is also home to the FAANG stocks – Facebook (now known as Meta), Apple, Amazon, Netflix, and Google (now known as Alphabet). These conglomerates control a vast majority of the global digital economy with a proven track record of consistent and gradual growth – who wouldn't want to be a partial owner of such companies?

Tapping into the global markets is definitely a great way to diversify your investments. But as with any other investment opportunity, there are risks and plenty of challenges to be aware of. If you've done some research and find investing overseas a daunting affair, perhaps engaging the services of a licensed financial planner is a solid step to make. RinggitPlus Financial Planner provides comprehensive one-on-one financial planning sessions with our Licensed Financial Planners, enabling you to take charge of your finances and achieve your goals in life.

## Some strategies for minority shareholders amid Omicron stock market volatility

Doubtlessly, the Omicron COVID-19 variant has given investors flashbacks to early 2020 when the pandemic first began spreading around the globe. Recall that the variant made a dramatic media entrance on Black Friday (26 November 2021), triggering a global stock market selloff after the World Health Organization (WHO) described Omicron as a variant of concern (highly transmissible although less severe than the Delta variant). As cases sprouted across the globe, governments have rapidly enacted bans on travelling from high-risk countries while extending COVID-19 social distancing rules. On 6 February, Malaysia's new coronavirus cases crossed the 10,000 marks with 10,089 cases reported. The last time Malaysia surpassed the 10,000 cases mark was on 2 October 2021 with 10,915 cases. Since then, the number of daily cases has risen to 20,939 as of 11 February 2022. Most of the new cases were in categories one and two and were either asymptomatic or only displayed mild symptoms. With the present R0/Rt reading of 1.2, Malaysia is expected to reach 22,000 COVID-19 cases by end-March, according to Health Ministry director-general Tan Sri Dr Noor Hisham Abdullah. As Omicron (or other emerging variants) is likely to become a regular disruptive feature in the global stock markets throughout 2022, below are some measures or events that minority shareholders should watch out for to safeguard their investments.

#### **Past lessons**

Thankfully, previous experience in managing the containment of the pandemic will come in handy coupled with the fact that thus far, hospitalisation rates are manageable in stark contrast to rising COVID-19 cases. While a hard lockdown with curfews, travel restrictions and border closures can be discounted, the impact of self-isolating, social distancing and health protocol can mean another round of headwind for businesses. Nevertheless, with the lower mortality and ongoing vaccination drive, there is likely a lower risk of prolonged and stricter lockdown measures. Here are some of the headwinds that investors should watch out for in the coming months amid heightened concerns over Omicron virus:

owing to strong demand that has come with economic rebound.

#### Volatile market

In 2020, COVID-19 wreaked havoc on the economy with the stock market posting one of its steepest declines in history at the early stages of the pandemic as investors were worried about the impact of the COVID-19 coronavirus pandemic. Whether there will be a repeat of that crash because of Omicron is anyone's guess. But the forwardlooking nature of the stock market has enabled a V-shape rebound insofar as the Dow Jones Industrial Index is concerned. After soaring to a record high of 29,551.42 on 12 February 2020, the Dow plummeted a record 2,997.10 points (12.93%) to close at 20,188.52 on March 16. Nevertheless, the 2020 recession was followed by a booming stock market with the Dow already surging past 30,000 points by 24 November 2020. The market continued to climb with the Dow closing at an alltime high of 36,799.65 after hitting an intraday record of 36,934.84 on 4 January 2022.

Like the Dow, Brent crude oil which saw its price tumble to US\$9.12/barrel on 21 April 2020 – a far cry from the US\$70/barrel fetched at the beginning of 2020 – has also rebounded strongly to the US\$92/barrel mark on 8 February 2022 with analysts predicting oil to hit US\$100/barrel amid demand recovery combined with falling stockpiles and supply disruptions. Above all else, these lessons taught investors that not all is doom and gloom as evident by how both the glove and tech stocks rallied to historical highs prior to the baton being passed to recovery theme stocks as the pandemic subsided and prospects of the economy re-opening brightened up.

#### **OPR** hike

It is widely expected that the central bank will keep its overnight policy rate at 1.75% until the end of this June, then gradually raise the benchmark overnight policy rate (OPR) beginning in the third quarter due to mounting inflationary pressures. Research houses like CGS-CIMB Research had estimated two rounds of 25bps rate hikes by Bank Negara Malaysia (BNM) in the second half even as concerns were raised with respect to the quantum of the hike given that higher inflation could further weaken consumers' purchasing power. From the research house's perspective, the rate hikes by BNM reflects several factors, namely (i) the economic conditions in 2022 are expected to be better than 2021 with lesser risk of lockdown and improved labour market environment; (ii) while higher inflation is projected, the increase is not excessive given prompt government reaction; and (iii) the interest rate level is still very accommodative for consumers and businesses.

spending and revenue collection in the mediumterm. This is given Malaysia's fiscal deficit is expected to widen to 6.5% in 2021 following an upward revision in spending by 0.6% of gross domestic product (GDP) while revenue collection slipped downwards by 0.5% of GDP.

Higher spending has been facilitated by an increase in the debt ceiling to 65% in October 2021, but debt service charges are expected to rise further to 18.4% in 2022.

#### **Co-existing with COVID-19**

Finally, endemic is the word that many investors must grow accustomed to as more economic sectors in Malaysia re-open for business while social and travel restrictions are gradually being lifted. When COVID-19 becomes an endemic disease, it means the infection will not go away and will continue to be transmitted. Whether it is the Omicron, Delta or IHU variants, COVID-19 is here to stay, hence everyone must get used to managing their lives while co-existing with virus. The time has come to resume life by adjusting to new norms while adapting to different yet safer working/living environment. Transitioning from a pandemic to endemic stage is about the community seeing a growing number of people who are immune to the virus, either through surviving natural infection or through vaccination.

#### **Tweaking investing strategies**

Even if the Omicron variant does end up causing new shutdowns, investors need not abruptly ditch their investment strategies. It took less than five months for markets to recover from the initial COVID-19 fear in early 2020 with any subsequent dips being quickly reversed. At this juncture, delving in stocks with strong fundamentals may be the best formula to give one's portfolio the best chance of surviving any potential volatility. With rigorous research and financial planning aptness, one should continue to invest smartly/consistently, true to the belief that opportunities abound amid adversities. The mantra to follow is to buy when there is fear in the market that depresses the prices of good stocks - and to sell when greed sets in. If stock prices fall, keep investing during downturns as it could be a fantastic opportunity to buy quality stocks at a discount. If prices surge, take profit as the market is volatile. It depends on your investment philosophy which may even vary according on a counter basis - a trading strategy for some counters or a long-term strategy for others. On the hindsight, avoid getting caught up in the market's day-to-day movements, especially by indulging in speculative trading - unless you have the stomach for it - it can be stomach churning and nerve wrecking. If you adopt investing as a longterm strategy, it doesn't necessarily matter how the market performs over days, weeks, or months or even a couple of years. So long as one's portfolio is made up of quality stocks, one's investments are likely to thrive over the long term regardless of the immediate market direction.

#### Supply chain disruption

For the past two years, the global supply chain was facing unprecedented pressure on the back of movement disruptions caused by the COVID-19 pandemic. Though it appears that supply chain disruptions are easing but it could get worse if the Omicron wave forces lockdowns in major economies again. On top of that, IHS Markit added that while the pandemic has been significant in driving the disruption – with the Omicron variant creating new uncertainties – it is not the only factor as substantial capacity, logistical and labour challenges also exist beyond the pandemic. Compared with a year ago, energy prices of crude oil, coal and natural gas are substantially higher

#### **Prioritising fiscal consolidation**

At the macroeconomic front, World Bank said Malaysia's fiscal consolidation will need to be prioritised to ensure effective government

## SHOW ME THE MONEY Economic Outlook 2022 Opportunities in the Recovery Market

**KC Lau** KCLau.com Peter Lim Associate Director Areca Capital

Roshan Kanesan CFP, Senior Financial Planner Jirnexu

This exciting event brought insights from financial author KC Lau on strategies to employ when venturing into value investing. Peter Lim, fund manager and associate director of Areca Capital provided projections of key market and economic fundamentals, and what they may mean for investors in 2022. The event was moderated by Roshan Kanesan, a certified financial planner, bringing an exciting balance to the discussion as he shared his perceptions on the prospects for 2022 with a key focus on the importance of financial planning for retirement.

## SMTM | ii

## **Contract for Difference (CFD)**

#### What is Contract For Difference (CFD) ?

CFD is an agreement between two parties to settle the difference between the opening and closing prices of the contract. CFD allow customers to participate in the price movement of an underlying product, such as indices and shares, without actually owning the asset.

## Leverage

Use of smaller amount of initial capital to gain exposure to larger trading position

## **No Expiration Date or Risk Of Delivery**

- CFD allow traders to perpetually hold the position - CFD are cash settled

## **Trade a Huge Range of Markets**

Trade over 100 Malaysia Shares CFD from various industries using one single platform

## **Popular Shares CFD from Various Sectors**

**Property** Eco World, SP Setia, Mah Sing, IOI Properties

## Peter Lim Tze Cheng

Associate Director Areca Capital

Peter Lim is currently a licensed fund manager and Associate Director of Areca Capital. He has been in the fund management industry since 2003, carrying various roles including CEO, Head of Equity, and Head of Research for both foreign and local asset management houses. He is also the author of What I Learnt As An Analyst, the winner of MPH 2020 Best Business Book Award.

## Between Inflation and the Deep Blue Sea

hile 2022 crept in with optimism riding on booster shots and talks of endemic transitionary plans, the new variant Omicron did put a dampner, but not as much as empty shelves and waning e-wallet balances. However, although inflationary pressure hangs like a dark socioeconomic cloud, there are opportunities in a recovery market.

Speaking at ShareInvestor's webinar last week, 'Show Me The Money – Economic Outlook 2022, Opportunities in the Recovery Market,' Peter Lim, licensed Fund Manager and associate director of Areca Capital shared his perspectives of the economic outlook as global economies worked to recover from the effects of the Covid-19 pandemic, amidst inflationary pressure.

In 2020, the world's GDP fell into a negative territory due to the unexpected pandemic. Lim projected that this year will see an economic recovery and the growth trend will continue, as global economies begin to emerge from the effects of the pandemic. rates in the US were a key mechanism in boosting recessionary pressure.

"Whenever there is a recession, the federal fund rates are pushed lower to help spur the economy and once the economy is on sound footing, the interest rates are gradually hiked up," he said.

Responding to a participant's observation that while interest rate hikes signal a good economy, investors tend to reduce their exposure in stock and move to safer, stable income, Lim agreed that this was not the best route. He opined that investors should view the bigger picture and understand that in reality, whenever there is an interest rate hike, it actually signalled economic recovery.

Interest rates are also raised when inflation is high. Economic recovery and inflationary pressure usually go hand-in-hand, as recovery spurs demand and therefore, inflationary pressure. Generally, inflation is driven by either excessive demand or a deficit in supply.

Analysing the currents, the port's throughput index in the graph below shows the world's trade moving through ports, a reflection of

#### Latest World Economic Outlook Growth Projections

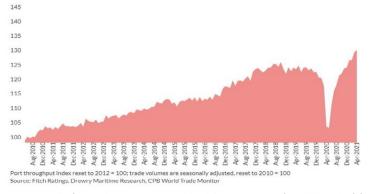

demand. The dip in April 2020 follows the series of global lockdowns due to the Covid-19 situation, and the subsequent spike as economies gradually opened up. In recent months, demand has surpassed the prepandemic levels.

Source: IMF, World Economic Outlook, October 2021

On the local front, GDP trends trailed the global markets as the lockdown affected the economy in Q2 2020. Lim projected a steady recovery in 2022 with positive GDP projections. He did not discount the possibility of the new Omicron variant skewing the numbers, but the vaccination booster jab provided a level of optimism.

Touching on the market perspective, Lim pointed out that the Federal Reserve fund

#### Port throughput index

Source: Fitch Ratings, Drewry Maritime Research, CPB World Trade Monitor

However, what is challenging is the supply side. The graph on the far right is indicative of the number of container vessels stuck at the Los Angeles ports, key ports in the US. Since the start of the pandemic, the ports have been cutting down operations, resultant of the lockdowns, lower demand and inefficiency from maintaining social distancing and SOPs. However, when demand resumed, ports around the world could not recover productivity levels accordingly, leading to backlogs. Compounded by a labour shortage, ports are yet to reach their optimum operation level. As demand surpasses pre-pandemic levels and port efficiency staggers below optimum efficiency, congestion is pressuring shipping costs by as much as nine-fold, as shown in the graph; thus compounding inflationary pressure around the world.

Lim opined that with inflationary pressure largely driven by logistical inefficiency locking supply, and to a lesser degree demand, a rise in interest rate would not curb the inflation. Responding to anticipation on whether the Federal Reserve will increase interest rates this year, Lim projects that rate hikes are likely to transpire only in the 2H 2022. He projects the biggest risk in the global economy and the stock market to be the rising shipping rates, rather than interest rates. An easing of these rates would hasten economic recovery, however its upward trajectory, could lead to a global recession.

#### What to look out for in the stock market

Lim cautioned that although shipping rates were high, it did not mean any company in the logistics sector would fare in tandem as costs at present were high, affecting margins. Good sectors to look at in 2022 according to Lim are 'recovery sectors' such as banks, consumer and industrial manufacturing.

During the Fire-side Chat, a session for participants to pose their questions to the panel, Lim stressed the importance of managing expectations when investing. He noted that fund management or investing is not about getting it right all the time, but ensuring that the counters you got right are able to compensate for the

On whether to buy a stock after a price drop, Lim advised investors to analyse the historical data. Citing the Malaysian tech sector, he noted that it had dropped 20% since its high in November last year. The PE Ratio was trending at about 60, but after the drop, PE Ratio recorded 48 times. From a historical perspective, PE Ratios in the tech sector averaged 30 times, therefore he called into question whether it was still considered cheap after the 20% drop.

Lim advised that investment analysis should comprise quantitative and qualitative analysis. While he accorded a 30-40% weightage on the former, it was the latter he called to focus. This represented research on the nature of the business, its prospects and the quality of management.

## **Tips on stock analysis**

Return On Equity is only one part of the equation in stock analysis. What is more important is that you have to break down your analysis to 3 portions:

1 Look at what the profitability is and compare it with the industry peers.

#### mistakes.

"When you look at it, the common criteria why you got it wrong is the expectation. It is not about the management's inability to grow the business but it is because you made the wrong call, perhaps because you were overconfident or excessively optimistic and fell into the expectation trap," he said.

Lim also cautioned investors who entered overly crowded sectors, such as the Tech sector.

"In such sectors, the slightest bad news will cause everybody to exit. So you face a situation where a 5% drop in profit could lead to a 26% drop in share price in a single day," he said.

- 2 Look at the asset utilisation how much revenue each dollar of asset is generating.
- 3 A point to note is that companies can increase/manipulate their ROE by adding more gearing to their balance sheet. They may have a lower profitability and lower asset utilisation, but if the business is highly geared, the ROE numbers can be attractive.

**KC Lau** KCLau.com

KC Lau is a Registered Financial Planner and the author of seven books including "Top Money Tips for Malaysians" and the latest "Money Smart: How to Achieve Your Financial Goals Faster with Less." He has published close to 1,400 article online and writes as a columnist for various magazines including Money Compass, Property Insights, New Straits Times and Smart Investor. Lau is the cocreator of over a dozen online financial courses among them, Bursa Method, Dividend Vault and Premium Webinar Membership. He guides and educates investors and potential investors through online seminars, having conducted over 562 seminars over the years.

# Strategies for success in Value Investing

f you did not catch our hot discussion on 'How To Be Smarter With Your Money In 2022' here's a quick catch-up on the do's and don'ts when you choose to venture into the Value Investing realm.

Presented by KC Lau, financial author, educator and trainer, the session was part of Share Investor's 'Show Me The Money – Economic Outlook 2022, Opportunities in the Recovery Market' webinar held last weekend. Lau laid out some lucrative pointers on value investing or 'buying low and selling high,' largely drawing parallels to strategies employed by Warren Buffet, known for his adeptness in figuring out a stock's intrinsic value before investing.

Value Investing essentially means buying a stock for less than its worth. A value investor identifies a stock trending below the perceived value or deemed 'undervalued' by the market and purchases it, holding on until the price rises presenting the investor with an option to sell above the perceived value or hold on to it believing the company's longterm fundamentals will eventually rake in handsome gains. Sounds simple enough, but the trick is how do you get the valuation right?

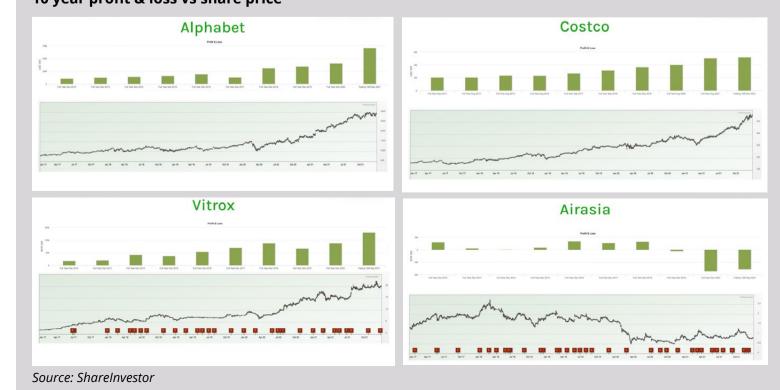

Value investors use a variety of valuation methods to help them uncover stocks they believe the market has undervalued. Although there's no one-size-fits-all to analysing a stock, value investors turn to various valuation methods to help analyse a company's fundamentals, and arrive at a perceived intrinsic value. Lau notes that the most difficult aspect of valuation is determining the 'growth rate' which is very subjective and dependent on an individual's perspective of the company.

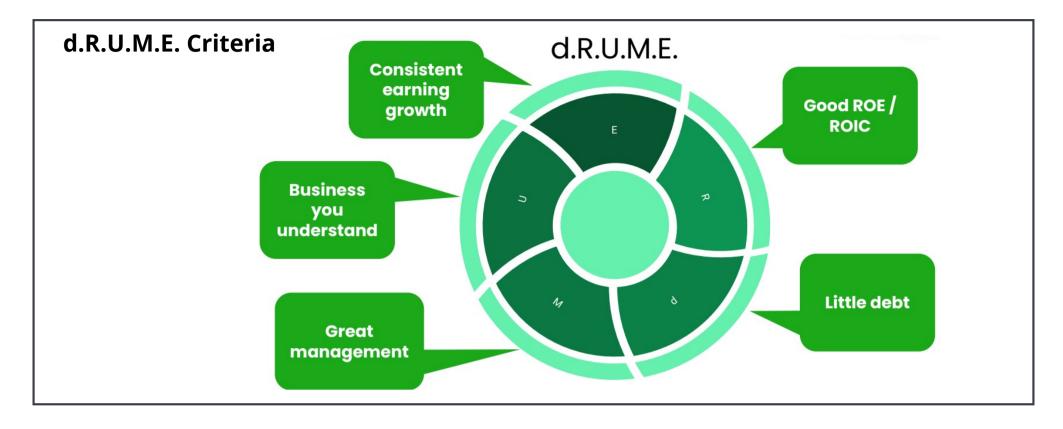

Identifying the type of industry a business operates in is crucial. Companies in a cyclical industry for instance, display volatility in earning, while bad businesses are simply in the wrong industry and cannot grow. The key is to sniff out the growing businesses that are in industries with optimistic future growth and one way to do this is to look at the profit and loss trends over a period.

In the graphs below, Alphabet, Google's parent company, Penang-based electronics company, ViTrox and retail-giant Costco display a consistent and steadily rising growth in profits. The share prices trend in tandem. Air Asia on the contrary, is in a cyclical industry and was adversely affected by the pandemic. As seen in the graph, Air Asia experienced volatility in earnings over the past decade and its share price trend corresponds.

During the Fire-side Chat session which invited questions from participants, one query asked the experts if they had bought into a position after a price drop. Lau noted that when deciding whether to buy or not, he first assesses the nature of the business. Cyclical businesses for instance are risky.

### The d.R.U.M.E. Criteria - 5 Steps to a Good Buy

Lau divulged his 5-step criteria to assess a company's potential before buying into it:

#### 1. Little Debt

Assess the company's debt level. Be wary of companies that utilise debts for expansion. A highly geared organisation has the tendency to head south especially when the economic cycle tips. Companies such as Air Asia which are in a capital intensive industry, tend to be highly geared. When the economy is adversely affected, its equity is exposed to negative market implications.

#### 2. Return on Equity

Seek out companies that have reported commendable return on capital. This show efficiency in managing investments and of course a high potential for returns on your investment.

You can use simple calculations like Net income / Shareholder's Equity to discover the Returns on Equity.

#### 3. Understand the business

#### 5. Earnings Growth

Seek out companies with consistent earnings growth for a period time, for example a 5-year period of consistent earnings growth. Lau also looks out for companies with large addressable market as it points to future growth potential.

Lau shared the pertinence of the Warren Buffet's 20-slot rule advocating how to buy and hold. Based on the rule, you have 20 slots to punch on your card representing the investments you make in a lifetime. The idea is when you have a finite number of major decisions to make in a lifetime, you will make better and bigger decisions with higher stakes for success. A key part of the rule is to exercise self-restraint and ignore what's 'trending' with other investors.

#### Patience, Inaction and the right time to exit

Lau reminds that a key to successful Value Investing is being able to simply do nothing. He advocates 'Patience' and 'Inaction' especially during non-recessionary periods.

"It is the best time to study businesses and identify which are good. You don't need to take a position yet, perhaps make small

Invest in a business you can understand and is well within your area of competence. Keeping abreast with your stock choice will entail reading reports and industry news, so try to invest in a business that excites you.

#### 4. Management

When you invest in a company, you put your money in the hands of its management team. Therefore, ensure the management has high integrity and is vested in the company's growth. A good sign is when the top management are substantial shareholders of the business, because they have bigger stakes and are most steadfast in ensuring the business succeeds. investment when you find a good counter," he advises.

Lau notes that investors often believe they could have made more, as pointed out by a participant, however he cautioned that any chance taken upon the possibility of an adverse trend, is not worth the risk.

With questions rolling in, Lau responded to a request for an exit strategy. "Firstly, I would exit when I realise that I have made a mistake. For example I bought a stock and I expect it to grow in the 5 to 10 years, but after about 2 years I realise I was wrong," he noted.

Citing his second exit strategy, Lau said he would liquidate even a loss making position when the capital is required for a more superior position or a better potential counter.

#### **Roshan Kanesan**

CFP, Senior Financial Planner Jirnexu

Broadcaster turned Financial Planner, Roshan Kanesan obtained his CFP certification at the end of 2020, the culmination of a long-time interest in all things personal finance. Prior to joining Jirnexu as Senior Financial Planner, he was a Producer/Presenter at BFM89.9, where he conducted interviews and discussions on a variety of subjects of interest to the business community of the Klang Valley. There, he was also able to deepen his focus into personal finance and financial planning, spending just under three years helming the station's personal finance show, Ringgit & Sense. Roshan holds a Bachelor of Business and Commerce, from Monash University Malaysia, where he majored in Finance.

## Are you doing enough to plan for your retirement?

f you have been dreaming of sipping an umbrella-dressed cocktail by the beach, while your money works for you, then it's time to assess your financial goals to ensure your retirement plans are well on track. But investing for retirement on its own may throw you off your course, if areas such as health insurance are insufficiently covered. Roshan Kanesan, Senior Financial Planner at Jirnexu, broke it down for participants during Share Investor's Show Me The Money – Economic Outlook 2022, Opportunities in the Recovery Market webinar last week as he shared tips and insights for holistic financial planning.

A comprehensive financial plan involves personal and financial goals with steps and timeline that cover insurance planning, cash flow management, risk management, investment planning, tax/zakat planning, retirement planning and estate planning.

Retirement Planning is the biggest financial goal for many individuals, as you will effectively arrive at a phase of being physically unable to work. Retirement Planning takes you through that phase in your life when you are not producing income.

Most individuals go through these three typical retirement scenarios, largely depending on their state of preparedness, earning capacity when they were employed and planned retirement needs.

#### Scenario 1 – You can Live Forever

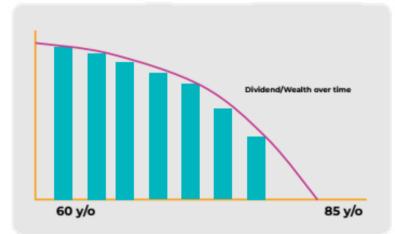

Typically known as the 4% rule, when your retirement savings are generating consistent dividend or investment payout to cover your monthly expenses and inflation to sustain you for a long time.

#### At a certain return of capital, you will

#### Scenario 2 - Enough retirement funds all the way until you 'go'

When you draw down on your capital but you prepare in such a way that you are able to drawdown on your returns and some of the capital to cover your monthly expenses throughout your projected life expectancy.

#### Capital will decrease over time as you drawdown on some of your return for monthly expenses

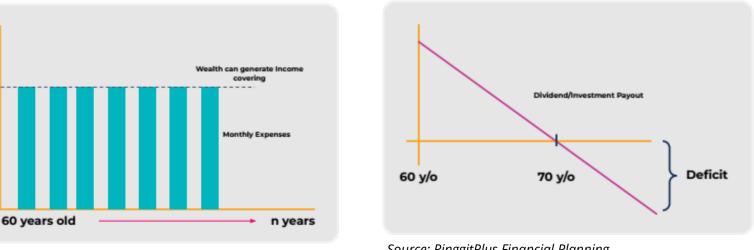

Source: RinggitPlus Financial Planning

#### Scenario 3 - You will have some headache during your retirement

This is a scenario you do not want to be in. Your retirement savings are only able to sustain you for a short term. In this situation, your options are to drastically reduce your expenses or get a job again, a situation that is becoming increasingly common as more individuals realise they lack funds to sustain themselves through retirement.

consistently produce sufficient returns to offset inflation and give you enough for your spending for the year"

In the absence of fresh funds, you will face a deficit in your savings

Source: RinggitPlus Financial Planning

Source: RinggitPlus Financial Planning

When performing financial planning strategies for retirement, Roshan warned of the effects of inflation and the need to plan for its impact on your retirement funds. At three varying inflation rates, he demonstrated the value of RM120,000 today in the future. At an inflation rate of 3%, a 30 year old today will need to have RM291,271 to equate to RM120,000 at a retirement age of 60, which Roshan estimated as an individual's approximate annual expense or an expense of RM10,000 every month.

## The Equivalent of Today's RM120,000 at age 60, adjusted to 2%, 3% and 4% Inflation Rate.

Current Age	2%	3%	4%
20	RM264,965	RM391,445	RM576,122
30	RM217,363	RM291,271	RM389,208
40	RM178,314	RM216,733	RM262,935
50	RM146,279	RM161,270	RM177,629

This is an estimation based on mathematical models and not a predictor of future values

Source: RinggitPlus Financial Planning

Assuming a requirement for RM120,000 a year, which is a high estimate for living expenses, the table below, estimates the amount you would need at age 60, based on a 5% annual return adjusted to 3% inflation. Therefore, if you are 30 years old now, you would need RM4,882,591 at age 60, to retire comfortably drawing RM10,000 monthly for living expenses.

#### Estimated Amount Needed To Retire For 20 Year At Age 60

Current Age	3% Inflation Adjusted RM120K	Amount Needed At age 60
20	RM391,445	RM6,561,794
30	RM291,271	RM4,882,591
40	RM216,733	RM3,633,106
50	RM161,270	RM2,703,372

This is a general estimate. Assumes retirement at age 60, inflation adjusted RM120,000/year in retirement, 20 years in retirement, 5% annual return in retirement and 3% annual inflation

Source: RinggitPlus Financial Planning

So how much do you need to save, assuming you are 30 years old now and need to have saved RM4,882,591 by age 60 to have RM120,000 to spend every year? The table below shows when investing in Fixed Deposits, at a 2% annual rate, you need to save RM9,909 a month, while if you are depending on EPF, your monthly deposits must be RM5,867 a month. If you have invested in funds that are bringing in about 9% annualised returns, you need to set aside RM2,667 a month. Roshan noted that usually a mix of investment methods are used, for instance the EPF subscriptions are compulsory for those employed, therefore it is paired with equities for instance, to arrive at higher returns. The difference in the interest rates you use will matter and how much you put aside, with this calculation you then be able to ascertain if your financial goals are realistic.

#### How Much Do I Need To Invest Monthly To Achieve Retirement

Current Age	Target Funds At age 60	2% (FD)	5% (EPF/ ASB)	9% (UT, Robo advisor, etc)
20	RM6,561,794	RM8,934	RM4,300	RM1,402
30	RM4,882,591	RM9,909	RM5,867	RM2,667
40	RM3,633,106	RM12,324	RM8,839	RM5,440
50	RM2,703,372	RM20,369	RM17,409	RM13,970

This is a general estimate. Target Funds at Age 60 is based on inflation adjusted RM120,000 and assumes 20 years in retirement, 5% annual return during retirement, 3% annual inflation

Source: RinggitPlus Financial Planning

#### **Targets?**

Roshan pointed out that while the EPF provides a good source of retirement savings, it is unlikely to suffice for retirement needs, because the amount that you are consuming is much higher than the returns plus the capital that it can sustain. However, he pointed out that EPF is a very good source of savings with returns of around 5% per annum. Ultimately, it adds a stable asset allocation in your portfolio.

Portfolio allocation generally needs to be reassessed as you progress in age, and go through different phases of life. Maintaining high growth asset portfolio, for instance exposes you to higher risk. Citing the Rule of 100 in portfolio allocation, 100 minus your age indicates the amount of growth assets you can have in your portfolio. At age 30, your portfolio allocation could be 30% stable investment such as EPF and 70% growth assets such as equities for the long term. Roshan also reminded participants that it is wise to keep their EPF money and allow it to compound rather than use it to purchase items that were beyond their reach when they were working. Ultimately, Roshan advises obtaining the services of a Financial Planner to ensure a well-balanced portfolio is achieved.

To answer a question on how to choose a good financial planner, he said financial planners had the fiduciary duty to use their best judgement in achieving a client's financial goal.

"Speak to the potential financial planner and understand their value sets, understand how they operate and ensure you are able to connect with your chosen planner," he said.

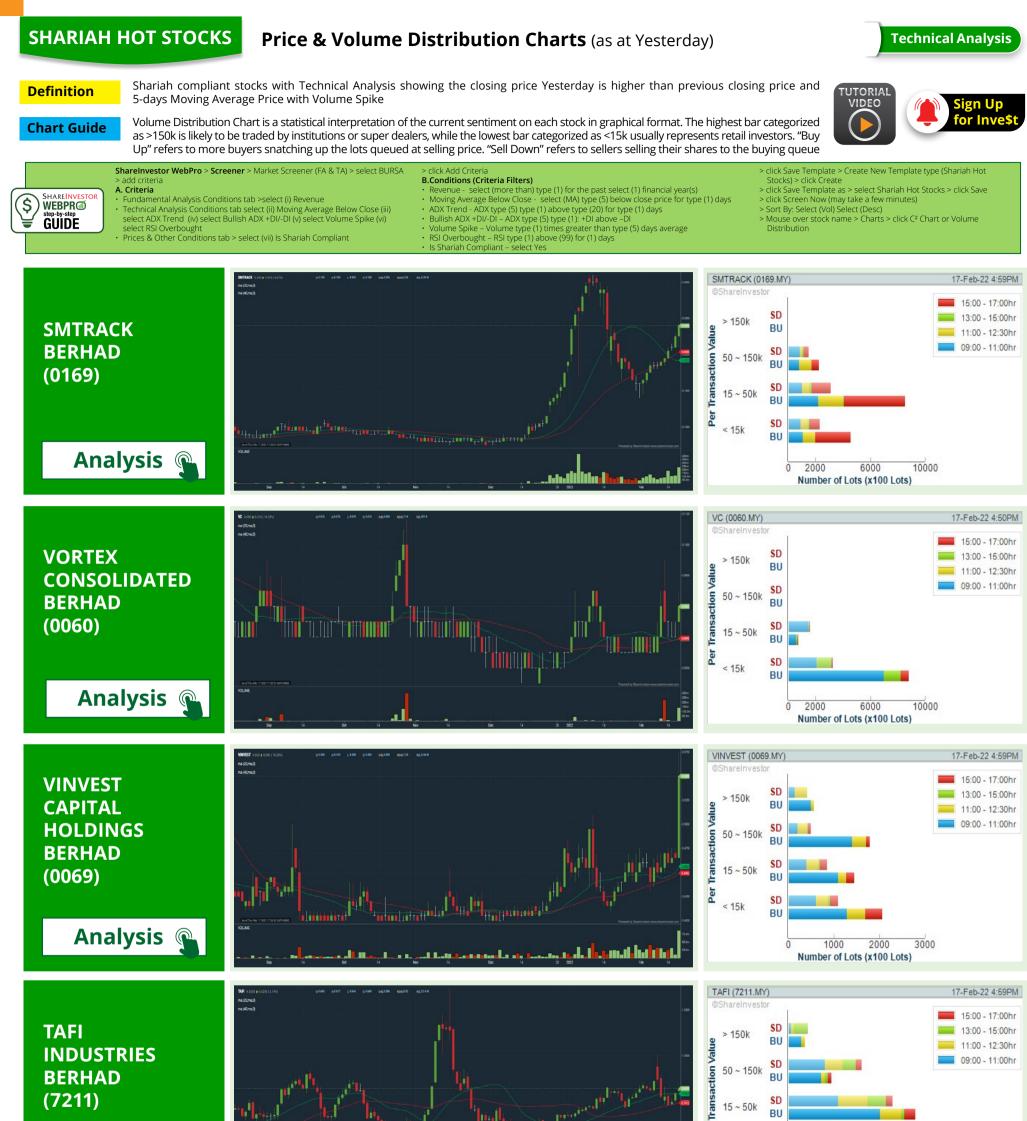

"If you have more completed goals and requirements, it is important to have a good relationship with your financial planner. A financial planner can only suggest and recommend, ultimately it's you who makes the decision."

## **EPF** Withdrawal Tips

- 1. **DO NOT** take out from EPF to invest in Unit Trusts with high cost structure and agent's fees.
- 2. **DO NOT** withdraw unless it is absolutely necessary
- 3. **DO NOT** withdraw from EPF post-retirement to purchase luxury items or to splurge, unless you have it planned.
- 4. Evaluate your risk-return before opting to withdraw from EPF.
- 5. Re-evaluate the need to withdraw for housing loans (approximately 3% interest rate), when EPF provides an annual return of about 5%.

### **COMPANY SPOTLIGHT**

#### **Company Background**

**SMTrack Bhd** is primarily engaged as a track and trace solutions provider that utilizes Radio Frequency Identification (RFID). It is involved in the design, deployment and distribution of radio frequency identity tags and other tagging and traceability solutions in Malaysia. The company's services include the ability to verify the history, location, or application of an item by means of documented recorded identification via identification tags (such as RFID tags and barcode). Technologies that can be applied in traceability solutions include RFID (Radio Frequency Identification), Barcode and GPS. It is the only company in Malaysia selected by the Government to visualize, and drive Digital Malaysia to establish a Trusted Mobile Digital

Wallet System based on Near Field Communication for Mobile Phone.

ShareInvestor is a technology based company with a focus on Internet media and we have operations in Malaysia, Singapore and Thailand. We are the market leader in providing a combination of market data, analysis and news on various platforms to traders and investors.

> Our websites include www.shareinvestor.com and www.bursastation.com. More information about our products and services can be found at <u>www.shareinvestorholdings.com</u>

### We are looking for Developers to join our team, in a challenging, yet fun and fulfilling environment. The successful applicants will leverage on the latest Internet technologies to help create financial applications and platforms for investors, listed companies and financial institutions. Fresh graduates are welcome to apply.

Interested candidates are encouraged to apply with full resume, present and expected salary and a recent photograph. Please send these to hr.my@shareinvestor.com for processing. ShareInvestor regrets that only shortlisted candidates shall be notified.

## Ruby on Rails Developer

# Application Developer (C++/STL)

<u>PHP</u> Developer

#### **Responsibilities:**

- Develop quality web-based software modules on schedule with a focus on Ruby and Ruby on Rails applications.
- Explore and utilize the latest web-based technologies.
- Document design specifications, logic concepts and module description.
- Maintain and enhance existing web-based applications.

#### **Requirements:**

- Experience in web-based programming/scripting is essential. Candidate must be able to explain clearly technical aspects of his/her past experiences and projects.
- Passion for programming and desire to learn new languages like Go.
- Good Diploma/Degree in Computer Science/Computer Engineering.
- Able to work well in a team and be able to follow documentation and coding standards.
- Knowledge in any of the following would be an added advantage
- Ruby and Ruby on Rails Framework
- Javascript and jQuery library
- Go
- Perl

#### **Responsibilities:**

- Deliver quality software modules on schedule.
- Document design specifications, conceptions, module description.
- Maintain and enhance existing applications.

#### **Requirements:**

- Passion for programming and desire to learn.
- Good Diploma/Degree in Computer Science/Computer Engineering.
- Skills in C++ is essential.
- Experience with Visual Studio, networking stack and Golang would be an advantage.
- · Proactive, resourceful and self-motivated with strong analytical skills.
- Good interpersonal, written and communication skills.
- Able to work with little supervision.

#### **Responsibilities:**

- Develop web applications in PHP
- Work with Front-End Developers for integration with visuals.
- Perform R&D work based on new ideas and concepts for future requirements and enhancement.
- Use ISON and REST API's for integration

- Advise and consult on technical queries on web development.
- Present ideas and concepts internally and be creative to propose and deliver solutions
- Provide support and maintenance for all related projects.
- Be actively involved in internal discussions, brainstorm-sessions, and other meetings.

#### **Requirements:**

- Bachelor's Degree/Diploma in Computer Science; Information Technology or equivalent.
- Minimum 3-5 years of experience working with at least one of the following PHP based frameworks: Symfony, WordPress
- Experience with AWS & Containerisation (Docker, GitLab, Podman) strongly preferred.
- Proven experience developing custom modules or framework extensions
- Very comfortable integrating with 3rd party APIs
- Strong skills in PHP, MySQL, BootStrap, HTML, CSS, Javascript/Jquery.
- Excellent communication skills to support healthy relationships with teammates and clients
- Good problem solving capabilities
- Able to showcase PHP projects which the candidate has implemented before.
- Familiar with secure coding practices
